ADP brings you the next generation user experience of our ADP Select application. In addition to a modern, responsive interface, the new user experience provides access to additional functionality and products, including:

+ **My Watch List**
  The landing page has always provided an overview of the most important information about your account. Now, this includes your most important candidates. My Watch List provides a simple way to mark candidates which you wish to monitor closely, by providing a status card for each of these on the landing page.

+ **Enhanced My Policy Assistant Access**
  Clients utilizing My Policy Assistant can easily see which candidates meet their hiring policy, and which require further review, directly from the landing page.

+ **Global Screening***

+ **Enhanced Workflow for Candidates With Maiden/Other Names***

To provide these new features, we have invested in support for the browsers that provide the best user experience. With the new user experience for ADP Select, we will no longer support users on Internet Explorer 8 or below.

The following browsers will be supported:
- Internet Explorer 9 and above
- Firefox (latest version)
- Chrome (latest version)

Clients will be upgraded to the new user experience in early 2015, and we will provide a specific date 30 days in advance of your upgrade.

Please see below for a guide to the new user experience:

* Maiden/other names search requires additional configuration. Global screening requires an addendum to your client agreement. Please contact the Solution Center after you have been upgraded to the new user experience to activate these features.

---

**Landing Page**
Candidates can be added to My Watch List during the ordering process, or by clicking the star icon next to their name on the search page. De-select the star to remove them.
Ordering Process for Packages – Step One
Select “Add to Cart” or “Remove from Cart” to manage your order. View an order summary using the Cart icon in the top right corner of the screen.
